

THE TOWLINE APPROACH

for woodshop automation

For handling large or heavy items that are difficult to hang and for items that do not require painting on the underside of feet or supports.

- The towline system can handle items that are awkward and extremely heavy.
- Track can be mounted in-floor (flush with the floor) or on-floor surface.

- Carts can stop, start or accumulate at specific points along the line.
- Top platens on carts can be set up to rotate manually or automatically.
