

Large inventory of C-250 conveyor components stocked. *Fast delivery on complete systems or small parts.*

PACLINE is ISO 9001 Certified

PACLINE C-250 Enclosed Track Conveyor

- **Simple and cost effective.** Bolted connections with no welding required makes C-250 installations quick and easy. You can install it yourself!
- **Versatile.** With a wide variety of horizontal and vertical curves, the Pacline C-250 offers great flexibility when installed in compact spaces or around existing equipment.
- **Safe.** The enclosed track design means the C-250 chain wheels are completely covered and away from workers' fingers.

PACLINE offers custom design services.

Carton and tray carriers come in a wide range of designs depending on your specific need: single carton hooks, dual carton hooks, trays for multiple cartons or gondolas with multi-levels.

Various drip trays can be added to maintain the sanitary conditions required in produce packing.

Conveyor can be supported from the ceiling using standard PACLINE components or from any number of custom floor supports.

Special protective guarding made from nylon mesh, steel mesh or sheet metal may be added to a system to help ensure worker safety in certain situations.

Overhead Conveyors for Food Packing Operations

Modernize your food packing operation

PACLINE makes it *WORK!*

High volume apple sheds have been utilizing PACLINE overhead conveyors to help reduce labor costs and increase profits.

Shipping cartons being conveyed above apple packing lines using overhead conveyor with single hook carriers.

Centralize Carton Forming

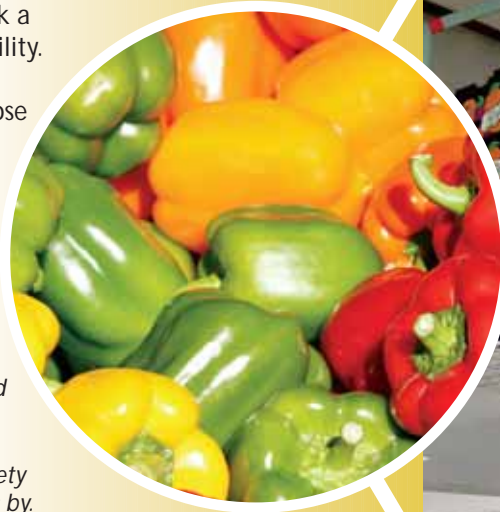

It is inefficient for packing operators to be forming cartons and trays *while* packing produce at the same time. By separating and centralizing the carton and tray forming operations you can improve productivity substantially.

Adding an automated carton former allows even greater gains in productivity.

Centralized carton building area where cartons are placed on overhead conveyor for transport to packing area.

Vegetable growers often pack a variety of produce at one facility. PACLINE systems with custom carriers allow packers to choose from multiple carton sizes as needed in the packing process.

Automate Carton Delivery

Overhead conveyors are the most flexible conveyors available. They can be routed to incline, decline or wind around equipment easily and without additional drives.

They can also be ceiling mounted to leave the floor area free and clear. Or, if needed, the overhead conveyor can be installed to run directly over the packing line and floor equipment.

Cartons carried over packing equipment in unused overhead space.

Shipping cartons being conveyed at ceiling elevation using multi-tiered "gondola" style carriers. Operators can select from a variety of cartons as the gondola passes by.

Produce like cherries are highly perishable and need to be packed out quickly and carefully. PACLINE can enhance your current operation by supplying an overhead conveyor that will improve speed and efficiency while maintaining the sanitary conditions required.

Multiple shipping cartons being conveyed over packing line on a single tier tray carrier. Chain has special "drip" trays to prevent contamination of the produce below.

Reduce Congestion at Packing Lines

Packing lines are busy areas. Adding cartons, trays and other packing material just adds to the confusion.

By removing empty cartons, trays and pallets, the packers become more organized resulting in a better work environment and higher productivity.

An organized packing area is safer and more productive.
